

## Exporting from Dragonframe

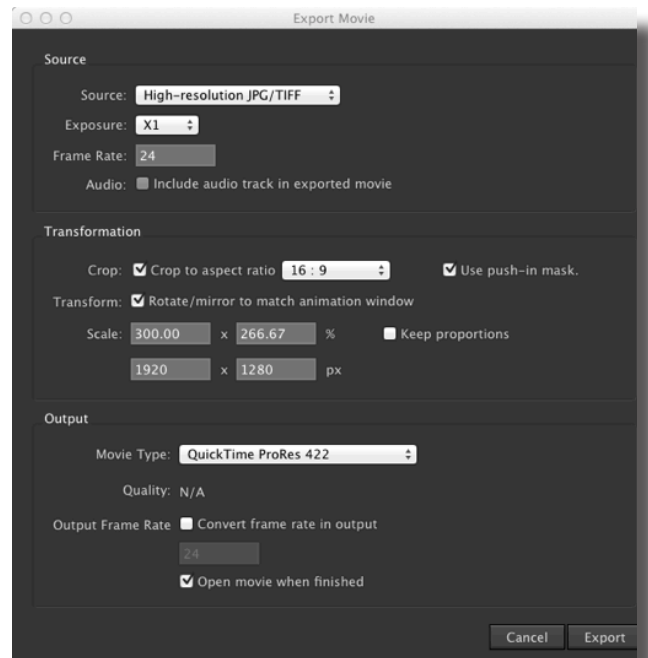

Check all of your **Source** settings to make sure you are exporting correctly.

1. Set Source to High-resolution JPG/TIFF
2. Set Exposure to X1
3. Set Frame Rate to 24

### Transformation

In the Transformation section adjust the crop aspect ratio to match your project settings.

1. Check “Crop to aspect ratio” and set to “16:9”
2. Check Rotate/mirror to match animation window
3. In the Scale section set px to “16:9 = 1920 x 1080”
4. Check “Keep proportions”

### Output

1. For Movie Type select:
  - Quicktime ProRes 422 for use in editing software.
  - Set the Quality slider to high if it is available.
2. Uncheck “Open movie when finished”.
3. Click “Export”
4. Name the file “ASSIGNMENT\_LASTNAME” (ex. SIMPLECYCLE\_BONADONA) and choose to save into the appropriate assignment folder.

and, last but certainly not least:

5. Open the exported file into Quicktime to make sure your movie exported correctly.
