

## Importing Audio in After Effects

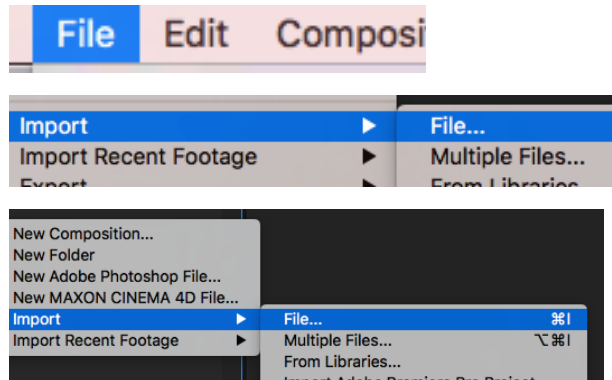

Remember there are several ways to import files.

“Command + I”

right click, “Import > File”

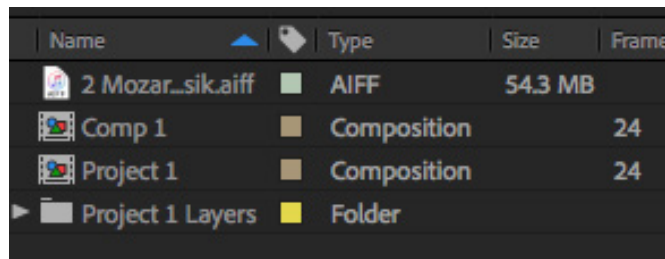

or, from the top menu, select

“File > Import > File...”

Locate your audio file, and select it for import.

You will see the file appear next to the other files you've imported and your compositions under the project tab.

Drag your file down into the timeline.

You want to see the waveform of your audio, so open the dropdown menu “Audio” and you’ll see the “Waveform” dropdown.

Select it, and the waveform will appear.
