

# Working with Photoshop files in After Effects

To import your Photoshop file go to the top menu and select **File>Import>File...** and navigate to where your .psd file has been saved.

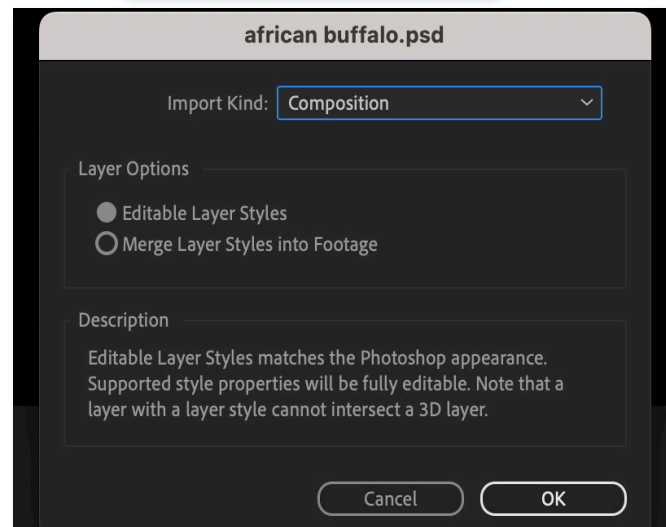

Select it, and click the “Open” button at the bottom right of the window.

In the window that opens, in the **Import Kind:** drop-down menu select **Composition**

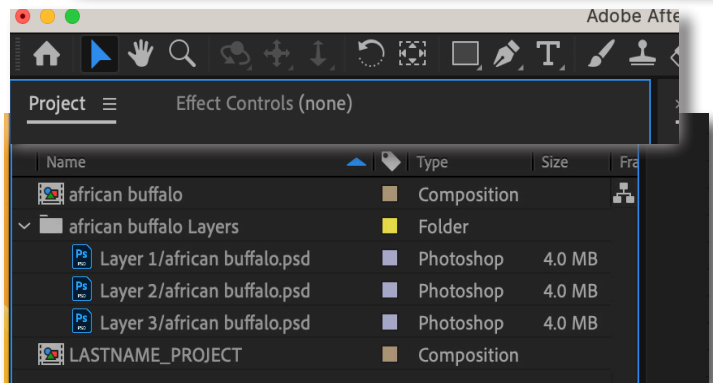

and select **Editable Layer Styles**,

then click the **OK** button

Locate your layers under the **Project** tab.

They will be in a Layers folder, which you can reveal by twirling the arrow icon to the left of the folder.

Select them, then drag and drop your layers to the timeline

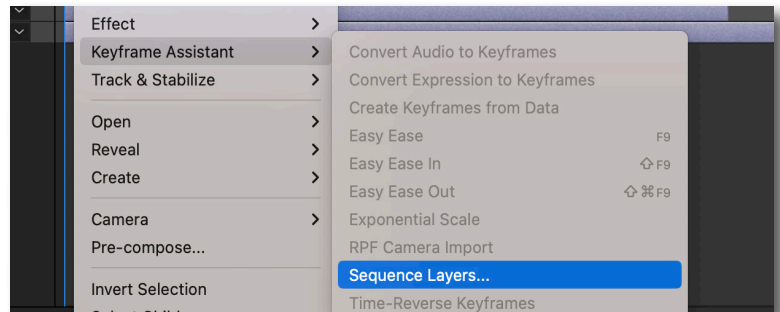

# Working with Photoshop files in After Effects

Adjust each layer to the desired length.

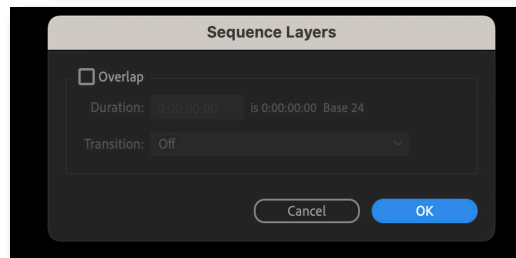

Select all the layers, then Left Click to reveal the selection menu.

Select *Keyframe Assistan>Sequence Layers*

Select **OK**. Do not overlap.

Your layers will now appear in the timeline as a sequence of still images.

If you choose to adjust the length of a layer after finishing these steps, simply repeat the previous two steps, using the Keyframe Assistant to re-sequence your layers.
